PRODUCT INFO

GLP PLUS+™

Oral GLP-1 Receptor Agonism
Fatty Acid Oxidation · Metabolic Flexibility

Orforglipron Metabolic
Signaling Capsule

What Is GLP PLUS+?

GLP PLUS+ is an advanced capsule designed to **support weight loss, appetite control, and healthy metabolism**. It helps your body use stored fat for energy while supporting the natural signals that help you feel full and satisfied after eating, making it easier to manage calorie intake.

Unlike many metabolic programs that require injections, **GLP PLUS+ is a simple oral capsule**. Its specialized delivery system helps the ingredients absorb effectively so your body can better support fat burning, appetite regulation, and energy production.

Many people use GLP PLUS+ as part of a medically supervised weight-management program to help reduce hunger, support metabolism, and promote healthier body composition.

What Does It Help With?

GLP PLUS+ is designed to support several key areas related to metabolism and weight management:

- **Appetite control** – helps support the body's natural signals that tell you when you are full
- **Healthy metabolism** – supports how your body converts food into energy
- **Fat utilization** – helps your body use stored fat as fuel
- **Energy production** – supports the cellular processes that generate energy
- **Balanced blood sugar response** – supports healthy metabolic signaling

How Does It Work?

GLP PLUS+ works by supporting natural metabolic signals in the body that influence hunger, fullness, and energy use.

The formula includes ingredients that:

- Help the body recognize when it has eaten enough
- Support better use of stored fat for energy
- Help the body convert nutrients into usable energy
- Support overall metabolic balance

Together, these actions may help make it easier to manage appetite and support healthy weight goals when combined with proper nutrition and lifestyle habits.

Who Should Use It?

This product may be used as part of a practitioner-guided wellness program for people who want support with:

- Weight management goals
- Appetite control
- Metabolic health
- Energy and fat metabolism
- Programs designed to support healthy aging and metabolic balance

Suggested Use?

Your healthcare provider will determine the best plan for you. A typical protocol may include:

- 1 capsule in the morning on an empty stomach
- Wait 30–45 minutes before eating
- Some programs may cycle use (for example, 5 days on and 2 days off)

Always follow the guidance of your healthcare provider.
